

STREAMLINING IT PROCUREMENT

Automating Standard Laptop Orders with Flow Designer

PROJECT DOCUMENTATION

Team ID	SWTID-2026-8526
Platform	ServiceNow Workflow Studio / Flow Designer
Flow Name	Standard laptop task
Application	Global
Primary Objective	Automate a standard laptop request workflow and create the required catalog task.

Project Overview

This project documents the configuration of a ServiceNow Flow Designer workflow for standard laptop procurement. The screenshots show the creation of a flow named Standard laptop task, the use of a Service Catalog trigger, and a Create Catalog Task action with request-item and assignment details.

Source Evidence

The implementation details and interface configuration in this document are based on the supplied project documentation format and the nine supplied workflow screenshots. The original sample documentation uses a structured project-description, workflow, milestone, and conclusion format. [\[filecite\turn0file0\L1-L15\]](#)

1. Project Description

Purpose

The workflow is designed to streamline the handling of standard laptop requests in ServiceNow. The configuration shown in the supplied screenshots establishes a flow that starts from a Service Catalog trigger and then creates a catalog task for the laptop requirement.

Business Scenario

Request	A user submits a standard laptop requirement through the Service Catalog.
Trigger	The flow uses a Service Catalog trigger to start processing the request.
Action	The workflow creates a Catalog Task for the request.
Task Detail	Short description shown in the configuration: "Laptop need to configured".
Assignment	Assignment group shown in the configuration: "Hardware".

Expected Workflow

1. Service Catalog Request Request enters the flow	→	2. Create Catalog Task Task is configured from the request data	→	3. Hardware Assignment Task is associated with the Hardware group
---	---	--	---	--

Configuration Evidence

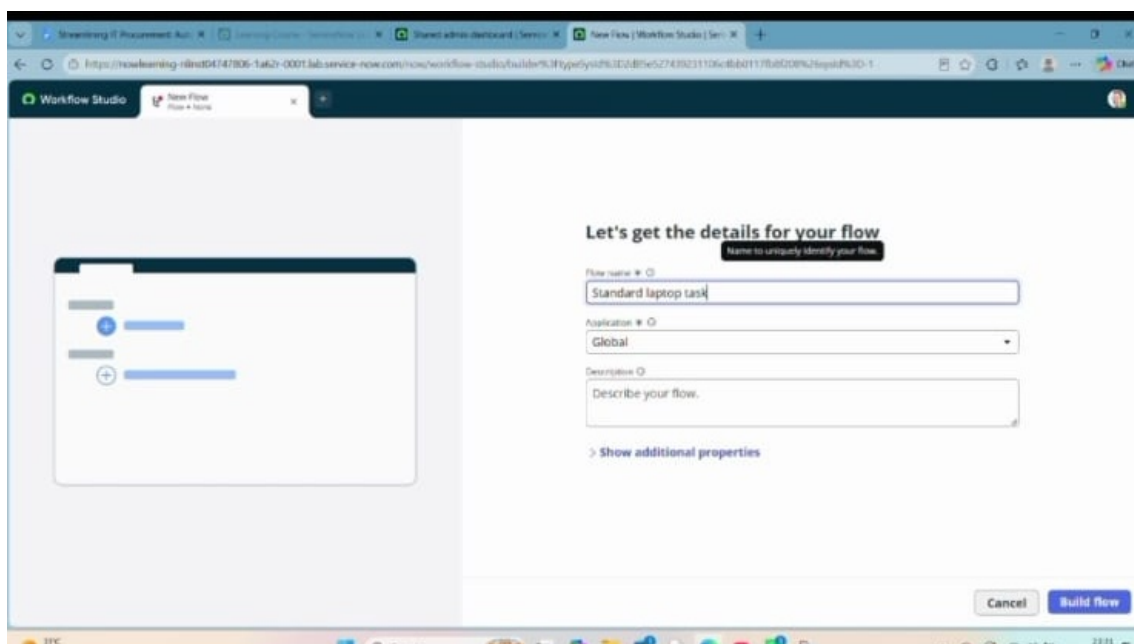

Figure 1. Flow creation screen showing "Standard laptop task", Global application, and flow details.

2. Flow Creation and Workspace

The first supplied screen shows the flow-creation form. The flow is named Standard laptop task and is created under the Global application. The next screen shows the resulting Workflow Studio workspace before the trigger and action are configured.

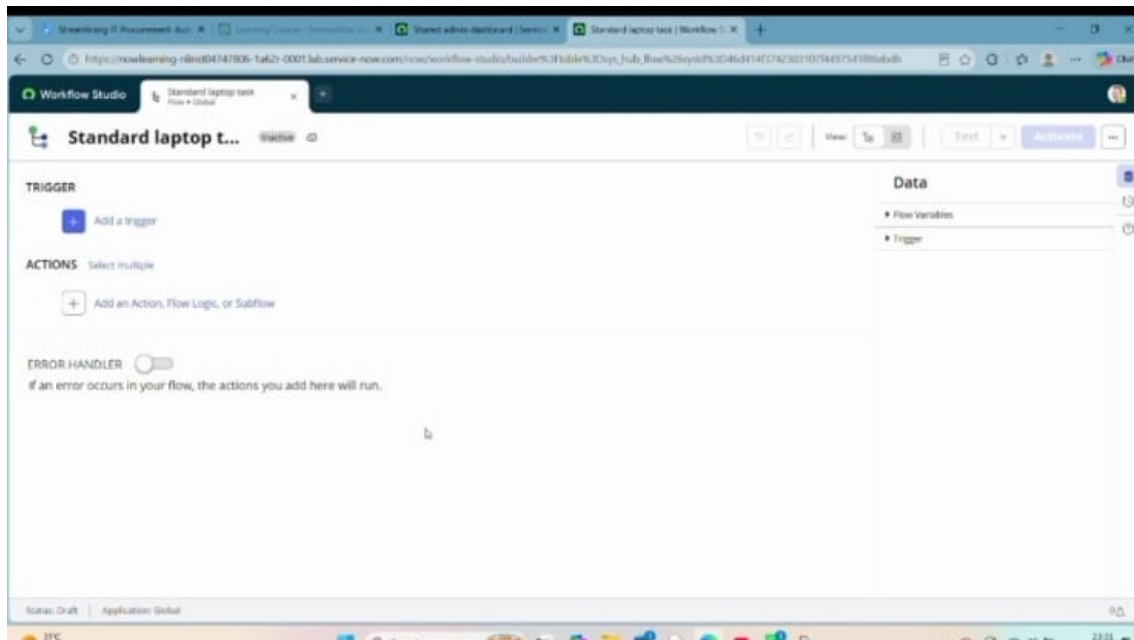

Figure 2. Workflow Studio workspace for “Standard laptop task” before configuration.

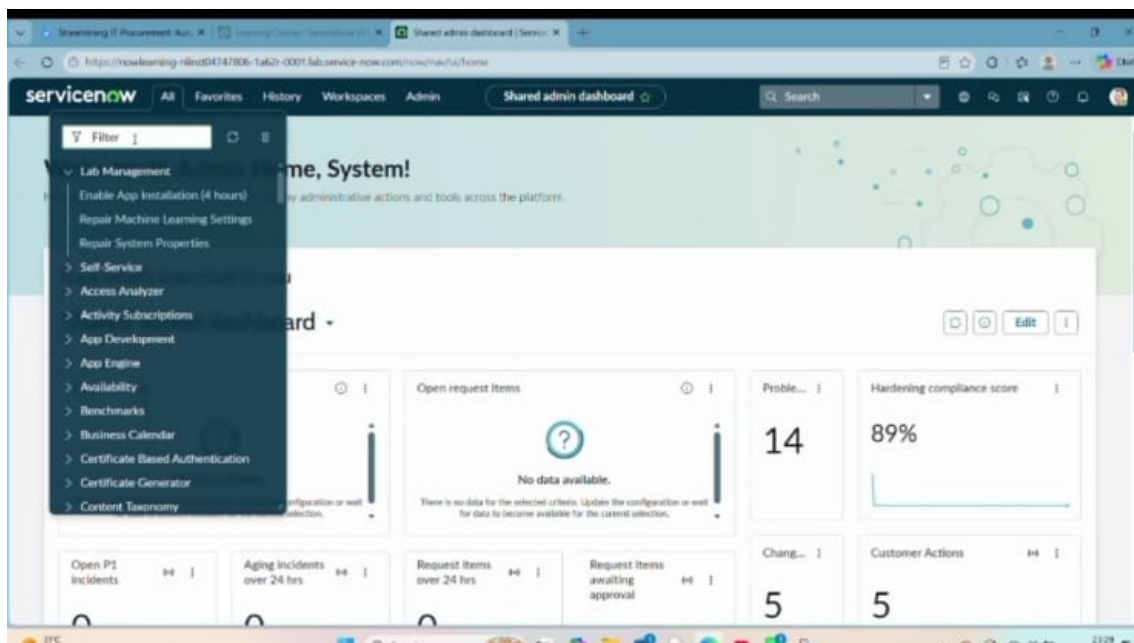

Figure 3. ServiceNow administration view supplied as part of the workflow setup evidence.

Configuration Note

The screenshots are presented as evidence of the configuration process. The workflow-specific screens are kept in sequence so the final document can be reviewed step-by-step.

3. Configure the Service Catalog Trigger

The supplied workflow screens show the trigger being added from the Trigger menu. The selected trigger category is Service Catalog, which provides the request context used later by the Create Catalog Task action.

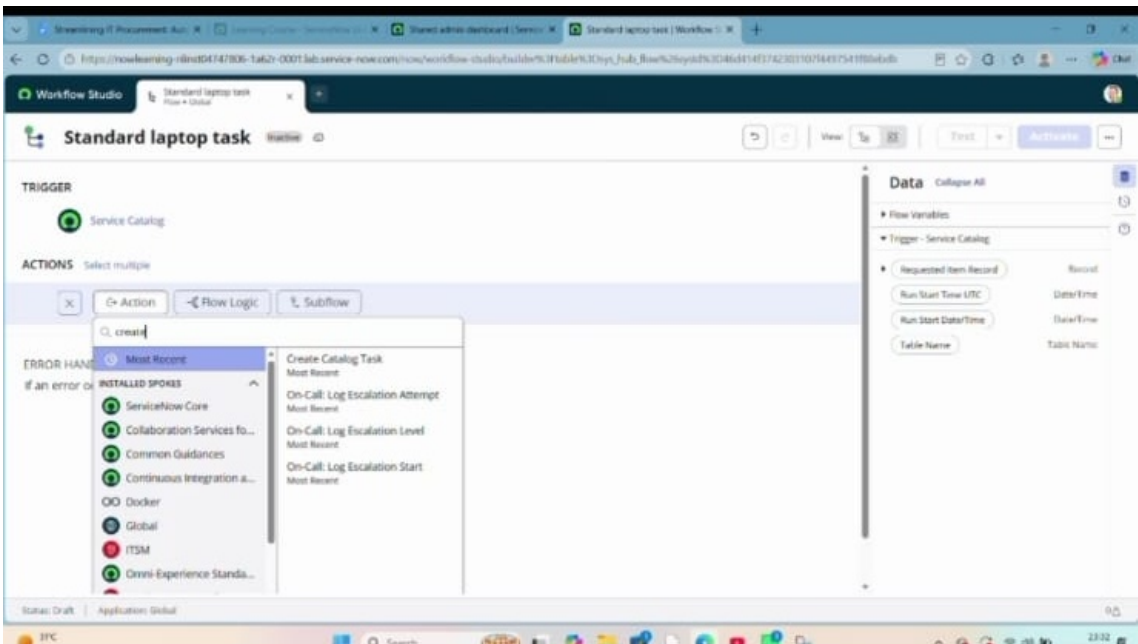

Figure 4. Action/trigger configuration workspace with the flow named “Standard laptop task”.

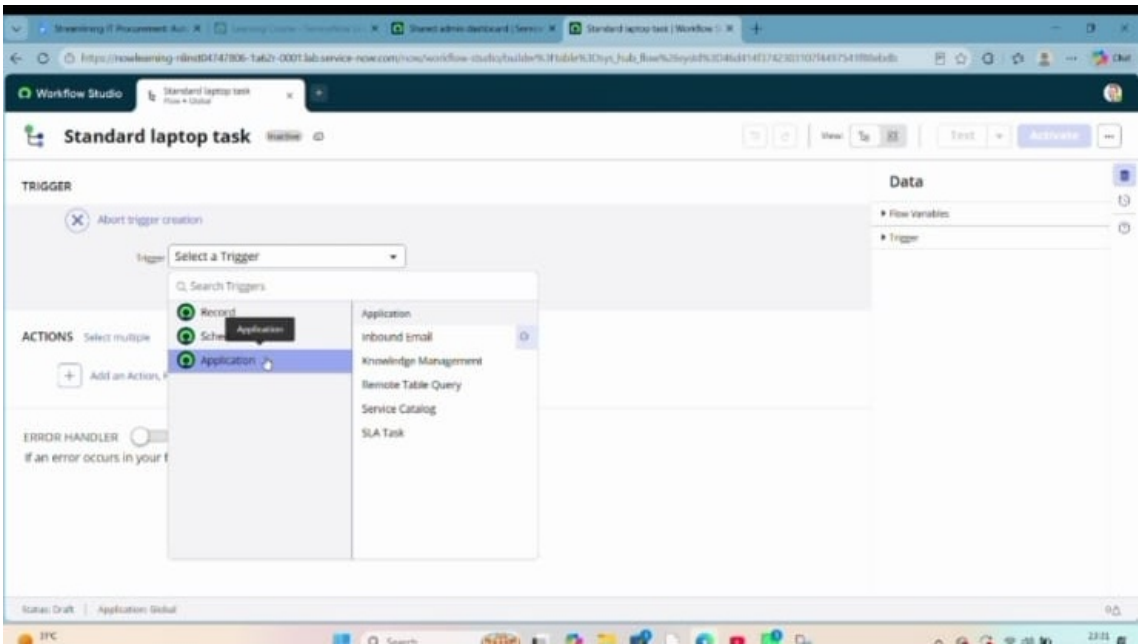

Figure 5. Trigger selection menu showing Service Catalog among the available trigger choices.

Trigger Type	Service Catalog
Purpose	Start the laptop-task flow from a service catalog request.
Data Used Later	The configuration exposes request-related data for the catalog-task action.

4. Add the Create Catalog Task Action

After selecting the trigger, the action menu is used to add Create Catalog Task. The action properties screen then exposes fields for the catalog task table, request item, short description, assignment details, and other task values.

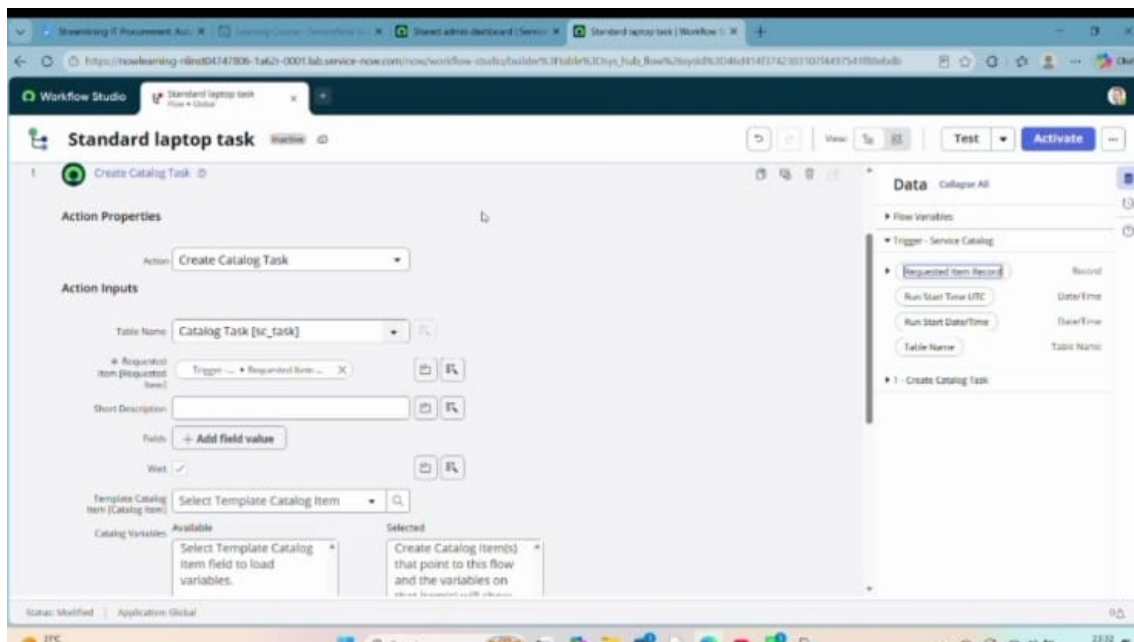

Figure 6. Action menu with “Create Catalog Task” selected.

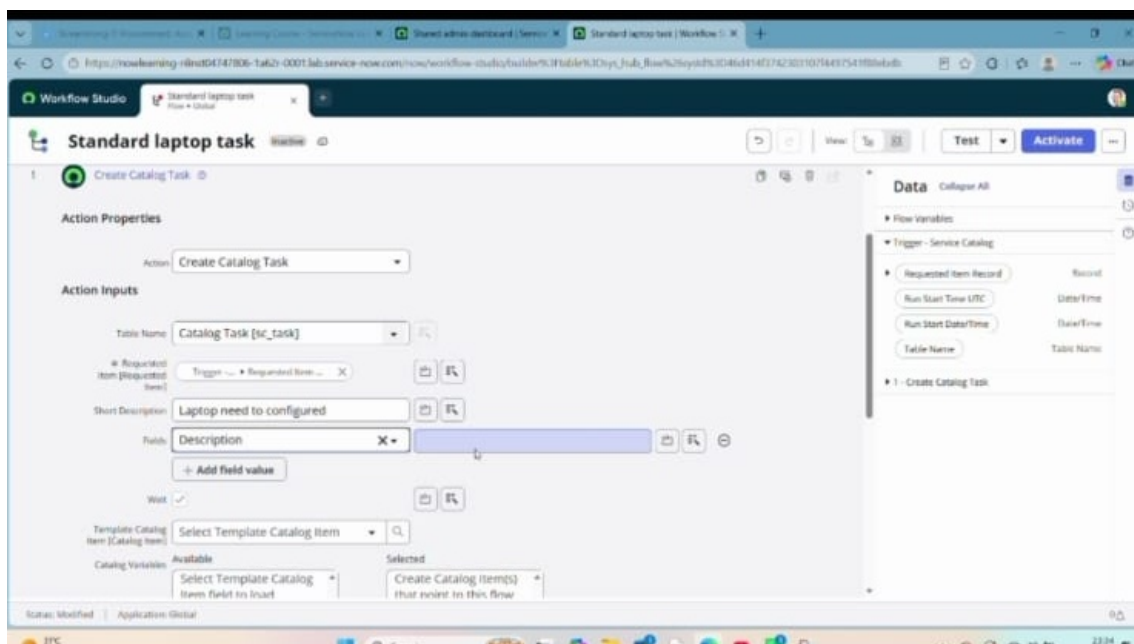

Figure 7. Create Catalog Task action properties with request-item and task fields visible.

5. Configure Task Details and Assignment

The supplied configuration shows the task description being entered and an assignment group being added. The visible values are retained exactly from the screenshots.

Short Description	Laptop need to configured
Assignment Group	Hardware
Request Item	Mapped from the trigger/request data
Action	Create Catalog Task

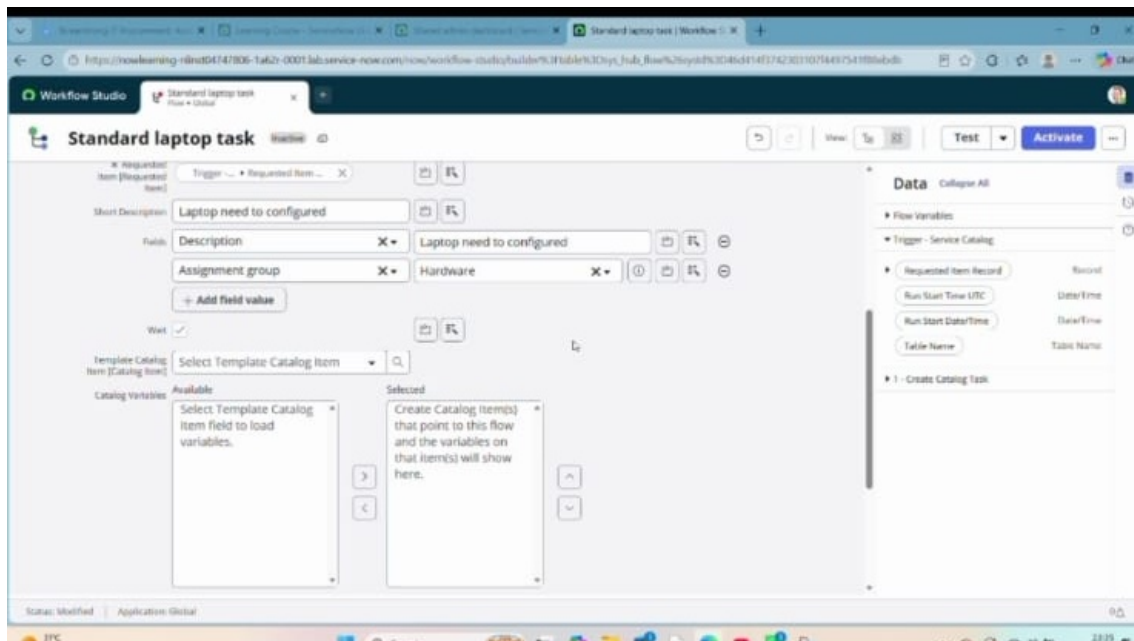

Figure 8. Task field configuration showing the description and Hardware assignment group.

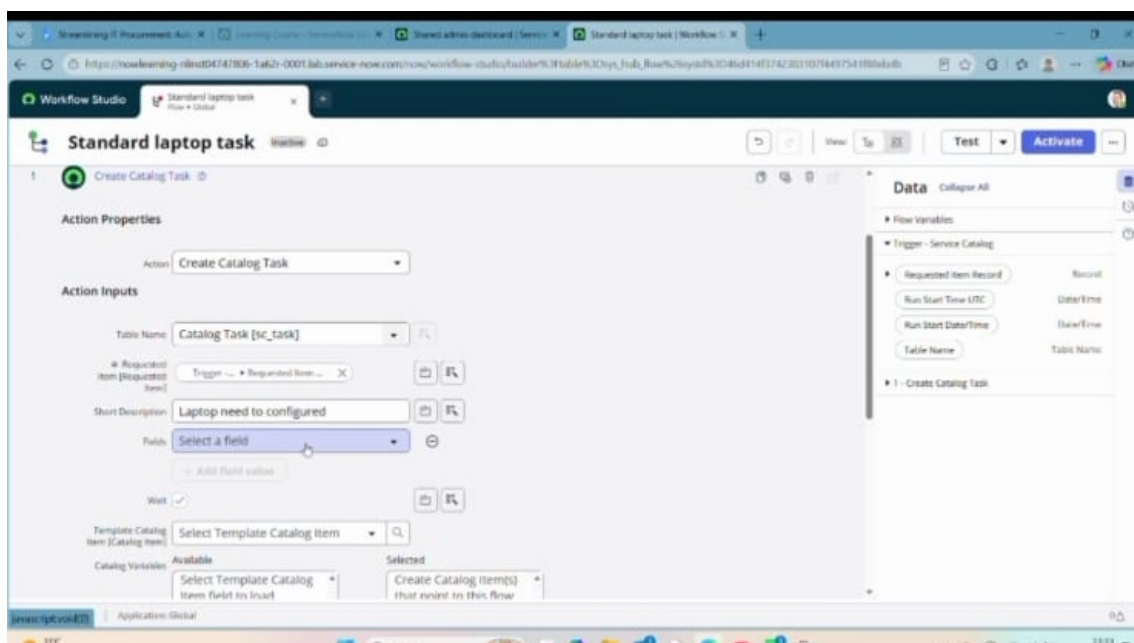

Figure 9. Final action-property view with the configured task description and field mapping area.

6. End-to-End Workflow Summary

Step 1	Create the flow named “Standard laptop task”.
Step 2	Use the Service Catalog trigger.
Step 3	Add the Create Catalog Task action.
Step 4	Use the request item data supplied by the trigger.
Step 5	Set the short description to “Laptop need to configured”.
Step 6	Assign the task to the “Hardware” group.

Configuration Checklist

- ☒ Flow name configured
- ☒ Global application selected
- ☒ Service Catalog trigger selected
- ☒ Create Catalog Task action added
- ☒ Request item data connected
- ☒ Short description entered
- ☒ Hardware assignment group selected

Expected Result

When the configured Service Catalog request enters the flow, the workflow is set up to create a catalog task with the displayed laptop requirement and route it to the Hardware assignment group. This standardizes the task-creation portion of the laptop procurement process.

Implementation Evidence

Figures 1–9 in this document preserve the supplied screenshots after removing the surrounding phone-gallery interface and cropping them to the desktop workflow area for cleaner presentation.

7. Conclusion

Project Outcome

The documented Flow Designer configuration provides a clear workflow for standard laptop-order processing. The supplied evidence demonstrates the creation of the flow, selection of the Service Catalog trigger, addition of the Create Catalog Task action, and configuration of the task description and Hardware assignment group.

Key Configuration Values

Team ID	SWTID-2026-8526
Flow	Standard laptop task
Trigger	Service Catalog
Action	Create Catalog Task
Short Description	Laptop need to configured
Assignment Group	Hardware

Project Documentation — Ready for Submission

Prepared from the supplied ServiceNow Workflow Studio screenshots and the uploaded project-documentation template.
